Oklahoma Academic Standards for Computer Science (High School)

Computing Systems	COMPUSCHOLAR ALIGNMENT
Devices	
L1.CS.D.01 Model how abstractions hide the underlying	Our courses contain lessons that describe how
implementation details of computing systems embedded	various hardware components (e.g. CPU, RAM, disk
in everyday objects.	drives) encapsulate computing tasks such as
	processing, short-term storage and long-term
Hardware & Software	
L1.CS.HS.01 Analyze the levels of abstraction and	Our courses describe the relationships between
interactions between application software, system	hardware, operating systems, device drivers, and a
software, and hardware.	variety of end-user applications.
L2.CS.HS.01 Identify and categorize the roles of a variety	Our courses discuss relevant operating system
of operating system software.	features and tasks including basic file management.

Troubleshooting	
L1.CS.T.01 Develop and apply criteria for the systematic	Our courses contain dedicated troubleshooting and
discovery of errors and systematic strategies for the	debugging information for relevant technology. The
correction of errors in computing systems.	programming courses describe how to use a variety
	of debugging approaches, including code analysis,
	tracing (logging) and setting breakpoints in a
	debugger. Best practices and common
	troubleshooting tips are provided as needed.
L2.CS.T.01 Illustrate how understanding the ways	Our courses contain lessons that describe hardware
hardware components facilitate logic, input, output, and	components including storage, processing and I/O
storage in computing systems will support	peripherals.
troubleshooting.	

COMPUSCHOLAR ALIGNMENT		
Network Communication & Organization		
Our courses describe networking components and		
common network topology. IP addresses, MAC		
addresses and URLs are introduced for identification		
of devices and online resources.		
Network design considerations, including scalability,		
bandwidth, security and points of failure are		
addressed where relevant.		
Our courses contain chapters or lessons on security		
topics, including physical vs. electronic security		
mechanisms where relevant.		
Our courses contain chapters or lessons on relevant		
security topics such as encryption (including SSL/TLS)		
and establishing defenses against mal-ware and		
viruses.		
Our courses contain chapters or lessons on relevant		
security topics such as encryption (including SSL/TLS),		
online safety and privacy, protecting personal		
information online, and establishing defenses against		
mal-ware and viruses.

Data Analysis	COMPUSCHOLAR ALIGNMENT
Storage	
L1.IC.SLE.03 Evaluate the social and economic	Our courses cover numbering systems such as binary,
consequences of how law and ethics interact with digital	decimal and hexadecimal. The encoding of data,
aspects of privacy, data, property,	including ASCII character and color representations is
information, and identity.	discussed where relevant.
L1.DA.S.02 Evaluate the trade-offs in how data is	Our courses cover representation of data in multiple
organized and stored digitally.	formats, from simple encoding of data types up
	through data structures and object definitions with
	properties. Choices of data type, data structure, or
	object definitions have pros and cons and may impact
	the desirable characteristics of the program or the
	maintainability of the underlying code.
Collection, Visualization & Transformation	
L1.DA.CVT.01 Use tools and techniques to locate, collect,	Our team projects and other labs give students
and create visualizations of small and largescale data	opportunities to research topics, obtain data sets,
sets (e.g., paper surveys and online data sets).	and produce digital artifacts or apps to visualize and
	explain the aggregated information.
L2.DA.CVT.01 Use data analysis tools and techniques to	Our team projects and other labs give students
identify patterns from complex real-world data.	opportunities to visualize and explain data by
	spreadsheet, charts & graphs or programmatic
	display, where relevant.
L2.DA.CVT.02 Generate data sets that use a variety of	Our team projects and other labs give students
data collection tools and analysis techniques to support	opportunities to research topics, obtain data sets and
a claim and/or communicate information.	produce digital artifacts to explain or influence
	opinion about an issue.
Inference & Models	
L1.DA.IM.01 Illustrate and explain the relationships	
between collected data elements using computational	N/A
models.	
L2.DA.IM.01 Use models and simulations to help plan,	Our courses contain opportunities for student to
conduct, and refine investigations.	build models of real-world phenomena and simulate
	or predict results. Students are encouraged to alter
	or modify input data to observe the impact on
	resulting output and verify initial assumptions.

Algorithms & Programming	COMPUSCHOLAR ALIGNMENT
Algorithms	
L1.AP.A.01 Create a prototype that uses algorithms (e.	Our courses describe how to use flowcharts to design
g., searching, sorting, finding shortest distance) to	algorithms to solve specific problems. Common
provide a possible solution for a real- world problem.	sorting and searching algorithms or game-specific Al
	routines are illustrated.

L2.AP.A.01 Model and use appropriate terminology to	Our courses contain context-appropriate descriptions
describe how artificial intelligence algorithms drive many	of AI algorithms such as game AI and applications to
software and physical systems (e.g., autonomous robots,	real-world problems (e.g. self-driving cars).
pattern recognition, text analysis).	
L2.AP.A.02 Develop an artificial intelligence algorithm to	Our courses contain context-appropriate
play a game against a human opponent or solve a real-	opportunities for students to study or implement AI
world problem.	algorithms to perform specific tasks (e.g. game AI or
	other real-world problems).
L2.AP.A.03 Critically examine and trace classic algorithms	Our courses contain appropriate analysis and
(e.g., selection sort, insertion sort, binary search, linear	comparison of algorithms, including multiple sorting
search).	and searching approaches.
L2.AP.A.04 Evaluate algorithms (e.g., sorting, searching)	Our courses contain appropriate analysis and
in terms of their efficiency and clarity.	comparison of algorithms, including trade-offs in
	performance, coding complexity, and accuracy of
	results.
Variables	
L1.AP.V.01 Demonstrate the use of lists (e.g., arrays) to	Our programming courses cover simple data
simplify solutions, generalizing computational problems	structures such as arrays and lists. Students will use
instead of repeatedly using simple variables.	each data structure in hands-on projects.
L2.AP.V.01 Compare and contrast data structures and	Our programming courses cover lists, stacks and
their uses (e.g., lists, stacks, queues).	queues and the trade-offs involved with each
	representation. Students will use each data structure
	in hands-on projects.
Control	
L1.AP.C.01 Justify the selection of specific control	Our courses cover traditional flow control structures
structures (e.g., sequence, conditionals, repetition,	(conditionals, loops, functions) and the trade-offs in
procedures) considering program efficiencies such as	design, including selecting between appropriate flow
readability, performance, and memory usage.	control logic.
L2.AP.C.01 Model the execution of repetition (e.g.,	Our courses include lessons on iteration using all
loops, recursion) of an algorithm illustrating output and	traditional looping structures, plus recursion. Careful
changes in values of named variables.	study is made of loop or recursive method behavior
	and resulting changes in variables. Students are
	introduced to debugging techniques such as
	breakpoints and stepping through live code at run-
	time.
Modularity	
L1.AP.M.01 Decompose problems into procedures using	Our courses cover Object-Oriented Programming
1 · · · · · · ·	
systematic analysis and design.	(OOP), modular programming with functions, and
systematic analysis and design.	(OOP), modular programming with functions, and functional decomposition of complex tasks down to
systematic analysis and design.	(OOP), modular programming with functions, and functional decomposition of complex tasks down to manageable logical blocks.
L2.AP.M.01 Construct solutions to problems using	(OOP), modular programming with functions, and functional decomposition of complex tasks down to manageable logical blocks. Our courses include opportunities for students to
systematic analysis and design. L2.AP.M.01 Construct solutions to problems using student-created components (e.g., procedures, modules,	 (OOP), modular programming with functions, and functional decomposition of complex tasks down to manageable logical blocks. Our courses include opportunities for students to build their own functions/methods and objects.

L1.AP.M.02 Create computational artifacts by	Team projects and other labs give students the
systematically organizing, manipulating and/or	opportunity to incorporate real-world data in the
processing data.2	creation of their own digital artifacts and programs.
L2.AP.M.02 Design or redesign a solution to a large-scale	Our courses compare and contrast standard
computational problem by identifying generalizable	algorithms for large scale sorting and searching. They
patterns.	additionally cover relevant AI algorithms to
	implement specific tasks or features.
L2.AP.M.03 Create programming solutions by reusing	Our courses explain and use relevant, language-
existing code (e.g., libraries, Application Programming	specific libraries such as the Java class library, the
Interface (APIs), code repositories).	.NET framework or Python modules.
Program Development	· · ·
L1.AP.PD.01 Create software that will provide solutions	Our courses contain team projects that allow
to a variety of users using a software development	students to define, design, build and test a unique
process.?	project using standard SDLC stages and traditional
	requirements, design and test documentation.
	Accessibility concerns are addressed as needed.
12.AP.PD.01 Create software that will provide solutions	Our courses contain team projects in which students
to a variety of users using multiple software	will experience standard software engineering roles
development processes.	and development life-cycles. Students will write
	project plans, requirements and design documents.
	and follow systematic test plans.
I 1 AD DD 02 Evaluate a variety of software licensing	Our courses contain lessons describing the types of
schemes (e.g. open source, freeware, commercial) and	software licensing, pros and cons of each and
discuss the advantages and disadvantages of each	intellectual property considerations

additional functionality and discuss intended and	code is provided and students will expand or
unintended implications (e.g., breaking other	complete the initial project. Regression testing is
functionality).	described in chapters of debugging and testing.

Impacts of Computing	COMPUSCHOLAR ALIGNMENT
Culture	
L1.IC.CU.01 Evaluate the ways computing impacts personal, ethical, social, economic, and cultural practices. ²	Our courses contain relevant lessons on the global impact of computing, ethical computing concepts, intellectual property and licensing, careers in computing, etc.
L2.IC.CU.01 Evaluate the beneficial and harmful effects that computational artifacts and innovations have on society.	Our courses contain relevant lessons on the global impact of computing. Students learn about their personal digital footprint and understand that digital identities and online actions have long-term or permanent consequences.
L1.IC.CU.02 Test and refine computational artifacts to ensure access to a variety of user audiences.	Students are presented with examples and projects that are free from bias and inequity, and are similarly encouraged to follow ethical practices in their own development.
L2.IC.CU.02 Evaluate the impact of location and user audience on the distribution of computing resources in a global society.	Our courses contain lessons on the global impact of computing and digital accessibility.
L1.IC.CU.03 Demonstrate ways a given algorithm can help solve computational problems across disciplines.	Our courses cover a variety of algorithms that can be applied to real-world situations in mathematics, physics, economics, etc.

L2.IC.CU.03 Design and implement a study that evaluates	Our courses include lessons on trends in future
or predicts how creating, testing, and refining	development, as well as opportunities to study how
computational artifacts has revolutionized an aspect of	Artificial Intelligence might be applied in a variety of
our culture and how it might evolve (e.g., education,	situations.
healthcare, art/entertainment, energy).	
Social Interactions	
L1.IC.SI.01 Demonstrate and debate how computing	Our courses contain relevant lessons on the global
increases and decreases connectivity and	impact of computing. Students may additionally learn
communication among people of various cultures.	about Internet communication tools and social
	media.
Safety, Law & Ethics	
L1.IC.SLE.01 Describe the beneficial and harmful effects	Our courses cover intellectual property laws,
that intellectual property laws can have on innovation.	copyright considerations and various types of
	software licensing.
L2.IC.SLE.01 Debate laws and regulations that impact the	Our courses cover intellectual property laws,
development and use of software.	copyright considerations and various types of
	software licensing.
L1.IC.SLE.02 Describe and discuss the privacy concerns	Students are taught to minimize their personal
related to the large-scale collection and analysis of	information shared online. They will learn about
information about individuals (e.g., how websites collect	their personal digital footprint and understand that
and uses data) that may not be evident to users.	digital identities and online actions have long-term or
	permanent consequences.
L1.IC.SLE.03 Evaluate the social and economic	Our courses cover computing ethics, copyrights,
consequences of how law and ethics interact with digital	intellectual property, personal privacy and computer
aspects of privacy, data, property, information, and	security. Relevant laws are discussed in each lesson.
identity.
